

IN THE CLAIMS:

1. (Currently Amended) An interchangeable sensor head component employable in a monitoring tool assembly, comprising:

an electronic connector portion configured to establish an electrical connection to a monitoring tool assembly;

at least one electronic component in connection with the electronic connector which is configured to perform at least one function; and

a memory device accessible through the electronic connector which is configured to store and provide access to operational information for the interchangeable sensor head component[[-]];

wherein the interchangeable sensor head component is further configured as at least one of: an interchangeable sensor configured to monitor at least one parameter and an accessory;

wherein the accessory comprises at least one of: a wiper device, a stirring device, and a shutter device.

2. (Canceled)

3. (Currently Amended) The interchangeable sensor head component of claim 1-2 wherein the operational information includes at least ~~one of:~~ identification information for the interchangeable sensor head component.

4. (Original) The interchangeable sensor head component of claim 3 wherein the operational information further includes at least one of: manufacture date, operating range, serial number, hardware revision, actual sensor serial number, actual sensor model number, and production technician ID code.

5. (Original) The interchangeable sensor head component of claim 4 wherein the operational information for the interchangeable sensor may further include at least one of: calibration data and calibration date.

6. (Currently Amended) The interchangeable sensor head component of claim 1-2 wherein the interchangeable sensor is further configurable as at least one of: an active sensor and a passive sensor.

7. (Original) The interchangeable sensor head component of claim 6 wherein the predetermined parameter comprises at least one of: conductivity, dissolved oxygen, pressure

and/or turbidity, oxidation reduction potential (ORP), chloride, nitrate, chlorophyll, ammonium, and temperature.

8. (Canceled)

9. (Original) The interchangeable sensor head component of claim 1 wherein the electrical connector portion further comprises a plug-in connector portion for providing electrical interconnection between the enclosed electrical apparatus and a mating plug-in connector positionable within a port.

10. (Original) The interchangeable sensor head component of claim 9 wherein the electrical connector provides at least one of: a two wire connection, a four wire connection, and a six wire connection.

11. (Original) The interchangeable sensor head component of claim 1 wherein the memory comprises an EEPROM.

12. (Original) The interchangeable sensor head component of claim 1 wherein the interchangeable sensor is further configured to monitor a plurality of the parameters.

13. (Currently Amended) An interchangeable sensor head component for use with a monitoring tool, comprising:

an elongated housing portion configured to include an electrical component; and
a base portion connectable to the elongated housing portion, where the base portion is configured to engage and disengage within a port through application of a linear force[[-]];

wherein at least one radially compressive sealing device is disposed around the base portion, wherein the at least one radially compressive sealing device is positionable on the base portion so as to expand within a specially configured cavity upon insertion of the base portion in the port, and generate a force which resists removal of the base portion from the port.

14. (Canceled)

15. (Original) The interchangeable sensor head component of claim 13 wherein one or more one additional radially compressive sealing devices are disposed around the base portion for providing an environmental seal upon insertion of the base portion in the port.

16. (Original) The interchangeable sensor head component of claim 13 wherein the base portion further includes a plug-in connector portion for providing electrical interconnection between the included electrical component and a mating connector positionable within the port.

17. (Original) The interchangeable sensor head component of claim 16 wherein the base portion is further configured to provide at least one of: a two wire connection, a four wire connection, and a six wire connection.

18. (Currently Amended) The interchangeable sensor head component of claim 13 wherein the electronic component~~element~~ is configurable as a sensing device for monitoring at least one parameter.

19. (Original) The interchangeable sensor head component of claim 13 wherein the elongated housing and the included electronic component comprise an accessory.

20. (Original) The sensor of claim 18 further configured to monitor conductivity, wherein the elongated housing portion is configured to include first and second substantially parallel surfaces with a plurality of electrodes disposed on each of the first and second surfaces, the first and second surface are further oriented at an angle other than perpendicular to a longitudinal axis for the elongated housing.

21. (New) An interchangeable sensor head component for use with a monitoring tool, comprising:

an elongated housing portion configured to include an electrical component; and
a base portion connectable to the elongated housing portion, where the base portion is configured to engage and disengage within a port through application of a linear force;
wherein one or more one additional radially compressive sealing devices are disposed around the base portion for providing an environmental seal upon insertion of the base portion in the port.

22. (New) An interchangeable sensor head component for use with a monitoring tool, comprising:

an elongated housing portion configured to include an electrical component; and
a base portion connectable to the elongated housing portion, where the base portion is configured to engage and disengage within a port through application of a linear force;
wherein the electronic component is configurable as a sensing device for monitoring at least one parameter;

wherein the sensor is further configured to monitor conductivity, wherein the elongated housing portion is configured to include first and second substantially parallel surfaces with a plurality of electrodes disposed on each of the first and second surfaces, the first and second surface are further oriented at an angle other than perpendicular to a longitudinal axis for the elongated housing.

23. (New) An interchangeable sensor head component for use with a monitoring tool, comprising:

an elongated housing portion configured to include an electrical component; and
a base portion connectable to the elongated housing portion, where the base portion is configured to engage and disengage within a port through application of a linear force;
wherein the elongated housing and the included electronic component comprise an accessory.
